

Put the pieces together.
Surgical urology solution with
digital image communication.

The OEC® 9900 Elite comes with all the exceptional features you have come to expect from OEC for over three decades. The 1000 by 1000 high-resolution imaging chain provides superior image quality with either a nine-inch or twelve-inch tri-mode intensifier: Twice the resolution, four times the information. The system also comes with four pulse imaging modes and last image hold for dose reduction during urological procedures.

Ideal for urological and endourological procedures, the OEC 9900 Elite has the flexibility of a mobile system with fixed-room performance. With its improved DICOM information management interface and built-in DVD/CD burner, image transfer and recording has never been easier. See how the OEC 9900 Elite can enhance your overall operating room capabilities while still offering full urological functionality. Get the most out of your investment.

Pieces of the puzzle.

When you are ready to construct a new operating room or renovate an existing one, consider NuBOOM. With its compact design and incorporated software package, this digital communication system is the future of operating room management and integration.

NuBOOM®, from CompView Medical, has the flexibility and versatility to maximize your operating room resources and procedural scheduling. The system is available with two high-definition monitors mounted on articulating arms that allow for fluoroscopic and endoscopic images to be brought in close for optimal viewing. NuBOOM can be adapted for each procedure and for each surgeon and operating team.

The floor-mounted design of NuBOOM is ideal for both older and newer facilities as it affords clinical flexibility while providing state-of-the-art image viewing and management technology. Using the touch-screen interface, you direct incoming signals to specific monitors and, with the system's split screen capability, up to four images can be viewed concurrently. Customize the procedure to view it the way you want.

Sleek. Simple. Smart.

OEC 9900 Elite

- DICOM 3.0 internal interface with Query and Retrieve standard.
- Operation from either side of the system.
- 1000 by 1000 high-resolution imaging chain.

Urology Tables

- Specialized urology tables for improved patient access.
- Designed to facilitate imaging unique to urology procedures.
- Optimal for percutaneous urological procedures.
- Convenient patient loading and unloading.

NuBOOM

- Two positionable booms support two display monitors. (Optional wall-mounted monitor also available.)
- Articulating boom arms position monitors around the surgical field which accommodates a variety of ergonomic viewing angles.
- HD-SDI (High Definition Serial Digital Interface) input and HD display monitor configurations.
- Various control touch panel locations.
- Fully upgradable and relocatable.

Avance® Carestation®

- Pressure Controlled Volume Guaranteed Mode – delivers constant tidal volumes in the face of the compliance changes.
- Responsive low-volume breathing system.
- Software-based allows for easy upgrades to protect your investment.

Additional Equipment

- Film printers for hardcopy output.
- C-arm and table disposables and accessories as well as radiation protection.
- On-site, world-class GE service and support.

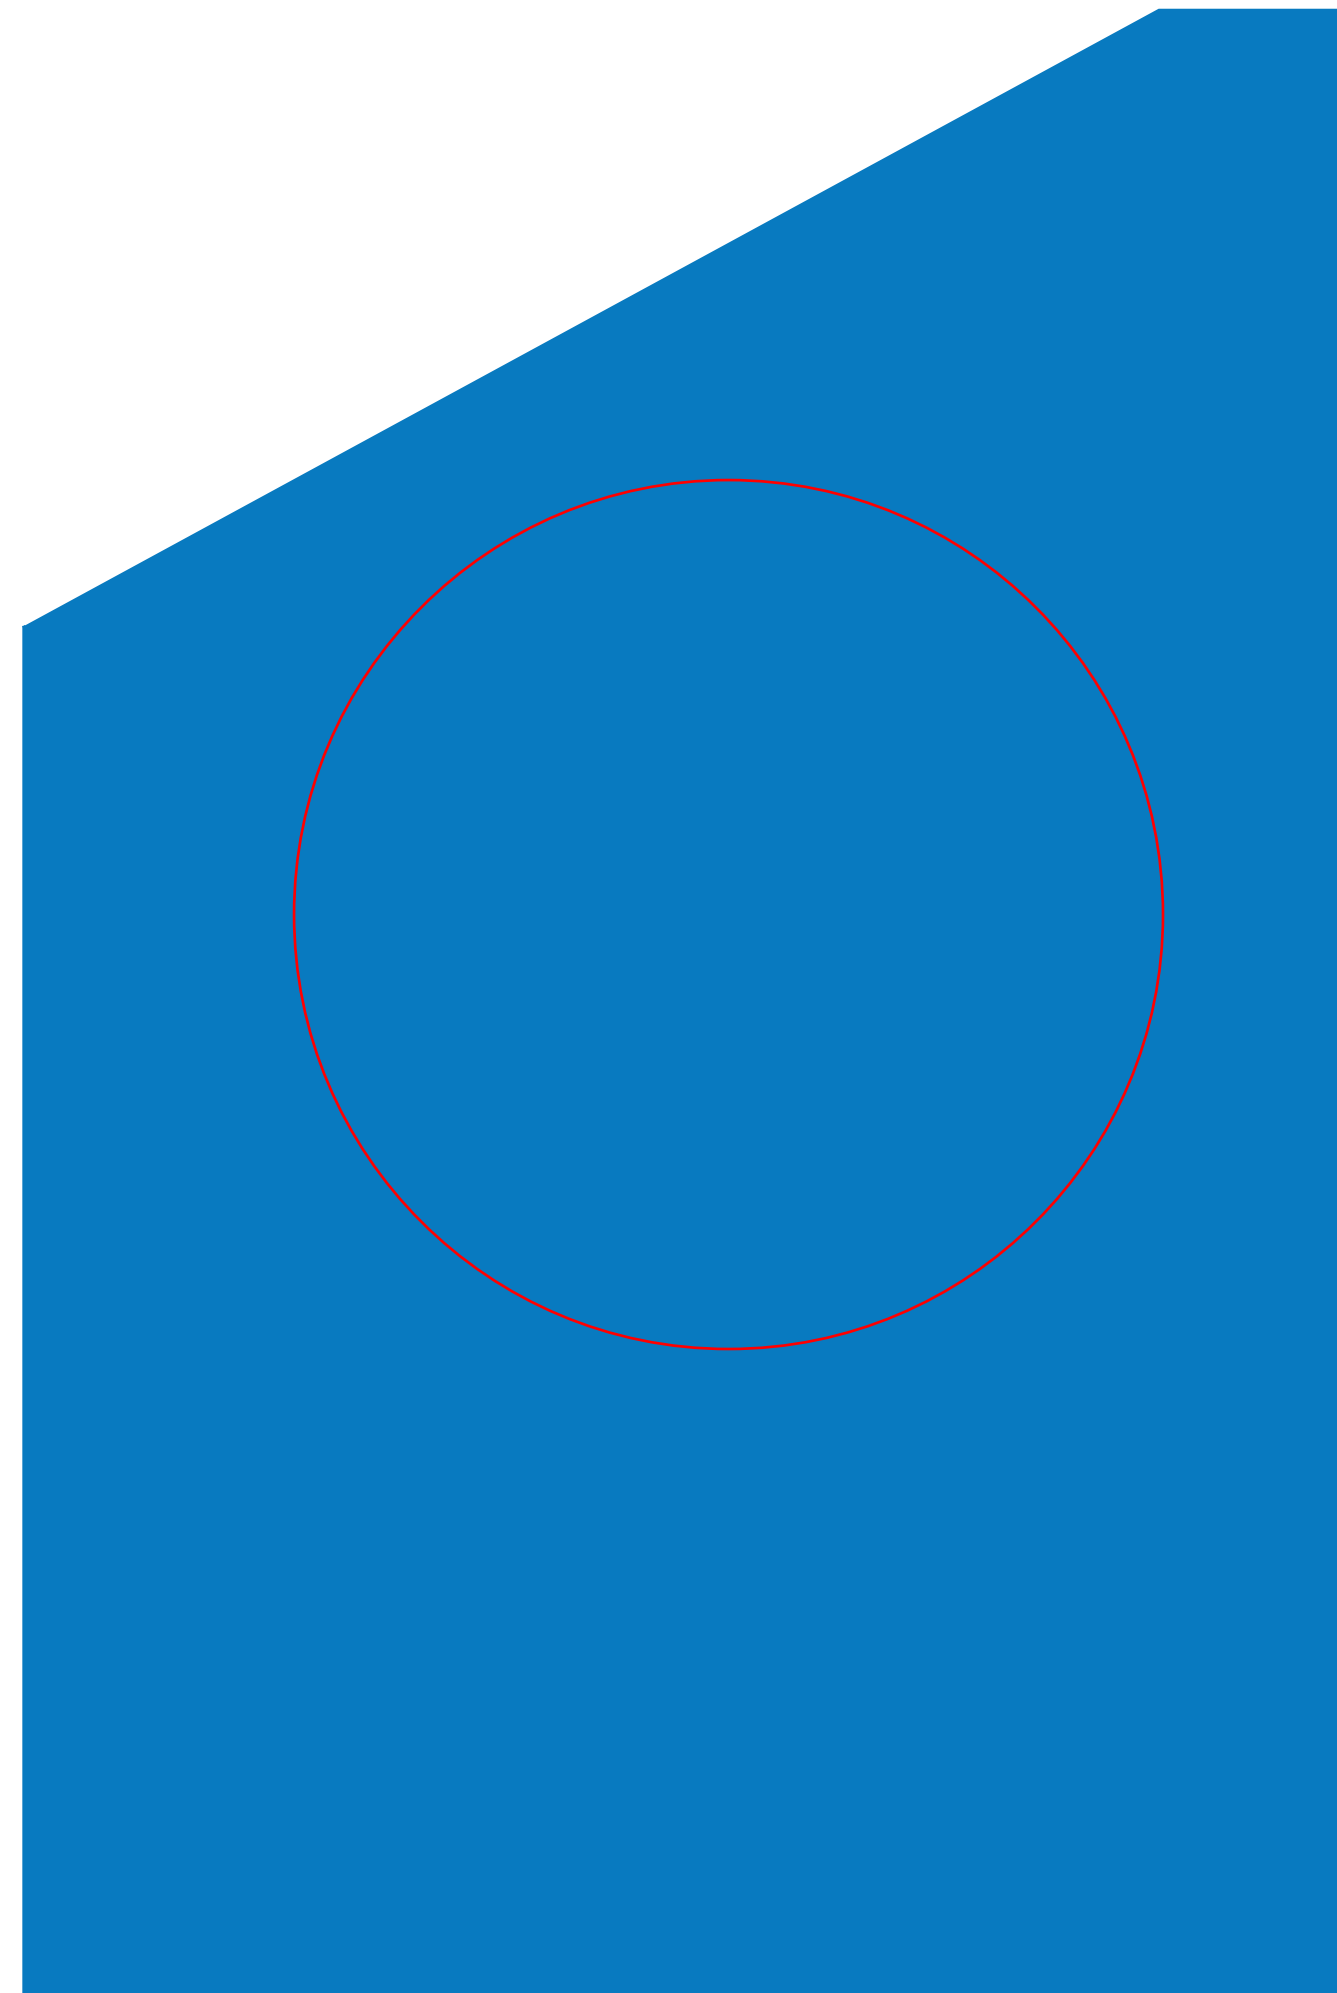

SOLUTION

GE Healthcare has all the pieces you need for a total urological solution.

Putting it together.

Turn to GE Healthcare, one of the most trusted names in surgical imaging, for all your urology practice needs. We are committed to helping you find the equipment to match your clinical requirements. From the industry-leading OEC 9900 Elite C-arm to an array of urology-specific tables and now with the NuBOOM video integration system, GE Healthcare has the pieces to help you put together a total urological solution.

Simple. Certain. Precise. Our commitment to you.
